

CRIME SCENE INVESTIGATOR

Do You Want to Use Science to Solve Crimes?

Crime scene investigators (CSI) are part scientist and part detective. The detective part involves gathering evidence at crime scenes. Every possible clue must be identified, photographed, tagged, and bagged. The scientist part of the job happens at the police lab where evidence is carefully examined using a variety of high-tech tools. Most CSIs have college degrees in criminal justice, forensic science, or biology. Thanks to their work, many a criminal has learned that crime does not pay.
